

IN THE CLAIMS

1-14. (Cancelled)

15. (Previously Presented) A tubing device, said tubing device comprising:

a support member having at least one substantially planar surface;

a channel formed in the at least one substantially planar surface, the channel having at least a semi-circular cross-section and lying in substantially a single plane; and

a means for holding a piece of tubing in the support member, the means comprising the channel having at least a semi-circular cross-section, with adhesive being used if the cross-section is not of a greater than semi-circular cross-section.

16. (Cancelled)

17-19. (Cancelled)

20. (Previously Presented) A tubing device, said tubing device comprising:

a tube support comprising a curvilinear channel disposed therein for receiving a piece of tubing; and

means for holding a piece of tubing in said channel wherein said tube support comprises:

a first portion and a second portion; and

said first and second portions being connected by a hinge.

21. (Previously Presented) The tubing device according to claim 20, wherein each of said first portion and said second portion of said tubing device comprises a channel.

22. (Previously Presented) The tubing device according to claim 21, wherein said channel in said first portion and said channel in said second portion are configured to align with each other to hold a piece of tubing between them.
